

WOMEN IN SUPPLY CHAIN (WISC)

Jessica Wiseman
Senior Associate
PwC

Jessica is a Senior Associate with PwC's Operations Consulting Practice in Calgary. As an experienced professional with 10 years of both industry and consulting experience, Jessica has a wide-range of knowledge in Oil and Gas with a focus on Enterprise-Wide Operational Excellence, Governance Documentation, and Enterprise Asset Management.

Jessica's Oil and Gas experience, both in office and in field, allows her to truly understand her client's challenges and proactively build innovative and realistic solutions. Her expertise revolves around using data analysis and best practices to support strategic decision making, identify cost savings opportunities, and drive operational efficiencies that are unique to each client's situation.

Jessica is recognized as an enthusiastic and motivated team player who builds mutually respectful teams that consistently deliver high value results. She is able to leverage her diverse experience, dedication to client excellence, and connection with her teams to consistently deliver value to her clients.

Relevant experience

Canadian Large Cap SAGD Oilsands company: As the Project Engineer accountable for a \$300MM new capital tie in project, Jessica oversaw the project from scoping through to construction commissioning. Responsibilities and initiatives included scoping, developing a structured tender review process and transformation of the reporting process. She is also responsible for overall cost control, schedule management and RFI resolution.

WOMEN IN SUPPLY CHAIN (WISC)

Midstream Oil & Gas Company: As a project analyst, she supported the execution of a strategic sourcing RFP for engineering and construction services to enable cost savings and process efficiency.

Key project highlights:

Analysis of RFP responses for both provided rates, and key contract exceptions and clarifications
Provide response summaries during facilitated client preparation sessions for contract negotiations with each supplier

Final summary provided to client based on negotiations and client established long term agreements with third party engineering companies

Develop an industry leading procurement process to support continued strategic sourcing RFPs.
Canadian Natural Gas Weighted E&P Company: As project lead, Jessica directed the project team in the development of management system documentation development (including Policies, Procedures, Standards, Guidelines, tools / templates, and control narratives). This included supporting the Facilities Delivery (Capital Projects) team in the development of a process for project initiation, planning, design, construction, reporting and close out. Other executed work streams included Surface Land, Development, and Field Asset Management and Reliability.
